

## Risk Mitigation Review

TOTAL POINTS 2

1. Which of the following is a functional risk in ML?

1 / 1 point

- ☐ When your QuAM is using the wrong mathematical function
- ☐ When the business function of your QuAM isn't defined
- ☐ When your users are applying your QuAM to the wrong function
- ☒ When your QuAM doesn't answer the defined question well enough

✓ Correct

2. Why should you start with a low risk ML project? (check all that apply)

1 / 1 point

- ☐ It's not a good idea, go big or go home
- ☒ It will give your business a better idea of the investment needed for big projects

✓ Correct

- ☒ It will affect the business less severely if things go wrong

✓ Correct

- ☐ There's no such thing as a low risk ML project
- ☒ It's a better way to build the capacity of your team

✓ Correct
